

ALULINE ADJUSTABLE HEIGHT NETBALL POSTS

Our “Aluline” Aluminium Adjustable Height Netball posts are the most advanced netball posts available today, and are designed using a custom aluminium extrusion made exclusively by us for use as sports posts.

- Structural grade alloy and wall thickness of up to 14mm gives the posts strength surpassing steel, while increasing rigidity and reducing post wobble.
- Utilises the low mass engineered Aluline extrusion for ease of handling and OHS.
- Catering for Netta use as well, this height adjustable system has been designed to allow seamless use at both regulation heights and anywhere in between.
- Adjustment is made from the ground and completed in seconds allowing play with no projection above the ring.
- Tight fitting sleeve and Anti-rotation mechanism integrated into the custom extrusion profile for reduced post movement.
- Fitted end cap to protect the court and staff from sharp edges and to minimise the risk of scratches to your surface.
- Milled net attachment meaning no risk of injury from sharp net ties.
- Designed primarily for sleeves, T-base conversion kits are also available, as is a bolt down premium competition version. A range of sleeves and caps to suit indoor and outdoor use are available.
- Optional post padding available.
