

## ALULINE NETBALL POST RANGE

The Aluline Netball Post system is designed for maximum stability and practicality, offering the most advanced netball post on the market.

Made from the durable Aluline profile, these posts are as strong as steel but much lighter, making removal and transportation easy while reducing the risk of damage to court surfaces.

Thanks to internal reinforcements, the posts feature a thick wall for increased rigidity, reducing movement when hit by the ball and minimizing the risk of bending when impacted by players. The bottom of the post is capped to protect both the court and staff from sharp edges, preventing scratches.

The special profile also includes an anti-rotation mechanism to keep the post secure and a WedgeLock system in the base to minimize wobble on impact. The redesigned goal eliminates traditional gussets, featuring an innovative wrap-around brace that allows for a full-height post pad. Additionally, the tube attachment system for the nets eliminates the risk of injury from sharp net ties.

Available in both standard (**NBAL**) and adjustable height (**NBALH**) configurations, the posts come with various sleeves and caps for indoor and outdoor use.

Optional **post padding** with custom printing is also available.
