

ALULINE RUGBY POSTS

HiTech Sport supplies a range of Rugby League and Rugby Union posts for all requirements. Dual code systems are also available. Most posts are tapered and feature internal strengthening spigots.

These systems are made from aluminium as steel will rust over time, is heavy and steel is never straight so the posts never look parallel.

All goals are supplied as sleeved systems, and have a high quality polyester powder coated finish. Systems are tapered*, and include steel internal strengthening spigots.

Our systems can be seen at premier international stadiums, overseas venues and schools, as well as local council parks and primary venues.

Systems are all designed to ensure maximum safety for the public and installation crews, and are available with hinged bases for added ease of removal in multisport venues.

Systems available in a range of heights;

- RUG6A Aluline 6m (*untapered model)
- RUG7A Aluline 7.5m
- RUG9A Aluline 9m
- RUG12A Aluline 12m
- RUG15A Aluline 15m

Custom sizes available on request.

HiTech Sports can also supply a complete range of post and fence padding as well as scoreboards.
