

INSTITUTIONAL PORTABLE BACKSTOPS

HiTech Sports offer a comprehensive range of Institutional Standard Portable Basketball Backstops. Based on international level systems, these smaller units are more compact and can have shorter projections. Ideally suited for shooting stations, and lower level school or community use.

As an alternative to roof or wall mounted systems which often require steel support structures, these are often price comparative with these other fixed options.

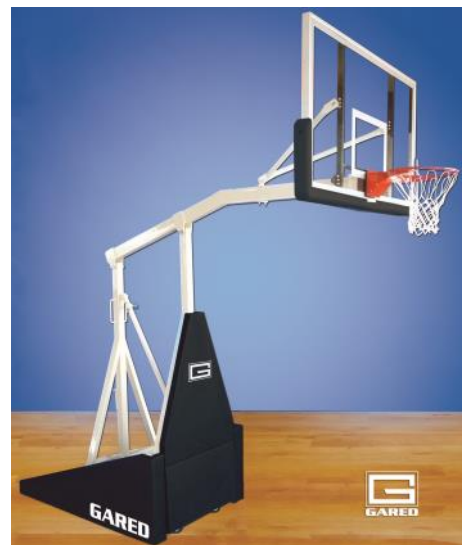

A range of systems and options are available from the major international manufacturers.

All systems can come with the required protective safety backboard padding, 180 degree pivot spring loaded ring, armoured glass backboard and are height adjustable.

Spring assisted systems are the preferred option as simpler and require much less maintenance. These units fold up compactly for storage, then can be wheeled out onto the court, locked into position, tied down to the floor anchor and unfolded ready for play by one person in minutes.

Other systems are available for FIBA Level One, Level Three, Club, Stadium, College and School levels.

Other FIBA certified systems like Padding, Scoreboards, Scoring Benches and Shot-clocks are also available.
