

## ALULINE NETBALL POST RANGE

The Aluline Netball Post system has been designed from scratch to deliver the most practical and stable Netball post available on the market today.

Utilising the Aluline profile, these posts are as strong as steel, but a fraction of the weight making removal from sleeves and transportation a breeze in comparison, and reducing potential risk of damage to court surfaces.

Through the use of internal reinforcements in the profile, the posts have an extremely thick wall which increases rigidity, and means less movement in the post when hit by a ball, and less risk of bending when hit by a player!

The bottom of the post is also furnished with a special cap which protects the court and staff from any sharp edges and minimise the risk of scratches to your surface.

Thanks to the special profile used for the posts, we have been able to incorporate an anti rotation mechanism to hold it in place, and a WedgeLock mechanism in the base to ensure the post sits firmly in place and reduces wobble on impact.

The goal itself has been completely re-designed and has no support gussets in the traditional form, rather a innovative wrap around brace meaning a full height post pad can be fitted. The goals also have a tube attachment system for the nets, meaning there is no risk of injury from sharp net ties.

The posts are available in standard (**NBAL**) and adjustable height configuration (**NBALH**), and have a range of sleeves and caps to suit indoor and outdoor use.

Optional post padding is also available.

**System:** Netball  
**Product Code:** NBAL  
**Related Products:** NBALH NBES NBALS GPT Pads
