

ALULINE NETBALL POSTS

“Aluline” Aluminium Fixed height Netball posts are the most advanced netball posts available today, and designed using a custom aluminium extrusion made exclusively by us for use as sports posts.

- Structural grade alloy and wall thickness of up to 14mm makes the posts strength surpassing steel.
- Increased wall thicknesses increase rigidity and reduces post wobble.
- Engineered for ease of handling and OHS.
- Utilises the low mass engineered Aluline extrusion.
- Anti-rotation mechanism integrated into the custom extrusion profile.
- Tight fitting sleeve for reduced post movement.
- Fitted end cap to protect the court and staff from sharp edges and to minimise the risk of scratches to your surface.
- Gusset free goal with innovative brace to allow a full regulation height 3m pad to be used.
- Milled net attachment meaning no risk of injury from sharp net ties.
- The posts are available in standard and adjustable height configurations (**NBALH**), and have a range of sleeves and caps to suit indoor and outdoor use.
- Designed primarily for sleeves, T-base conversion kits are also available, as is a bolt down premium competition version.
- Optional post padding available.
