COLUMN MOUNT SHOOTING STATION

MODEL
BBESC

An innovative shooting station design that optimizes space in a gymnasium at a cost effective price.

The Essentials Column Mount system easily clamps onto a vertical I beam in any building and provides an instant solution for practice shots.

- Featuring a high tensile moulded full sized fibreglass backboard
- Standard essential fixed goal and net
- Will mount onto any column up to 380mm wide
- Can be set at different heights as required
- Adjustable to cope with minor angles in the member it attaches to
- Worm drive height adjustment is available on request

Like international FIBA systems, this is a “direct mount” design where the goal bolts through the backboard onto the support structure.

⚠ This system is **NOT DESIGNED FOR SLAM DUNKING**, and it is strongly suggested that safety padding is installed on the beam when the structure is in use.

System: Basketball
Product Code: BBESC
