

COLUMN MOUNT BASKETBALL SHOOTING STATION

An innovative shooting station design to maximise space in a gymnasium at a cost effective price.

The Essentials Column Mount system easily clamps onto a vertical I beam in any building and provides an instant solution for practice shots.

- Featuring a high tensile moulded fibreglass backboard, available with a full sized backboard (**BBESCFS**) or 3/4 sized backboard (**BBESCHS**).
- Standard essential fixed goal and net.
- Will mount onto any column up to 380mm wide.
- Can be set at different heights as required.
- Adjustable to cope with minor angles in the member it attaches to.
- Worm drive height adjustment is available on request.

Like international FIBA systems, this is a “direct mount” design where the goal bolts through the backboard onto the support structure.

This system is **NOT DESIGNED FOR SLAM DUNKING**, and it is strongly suggested that safety padding is installed on the beam when the structure is in use.

BBESCFS - Full Sized Backboard

BBESCHS - 3/4 Sized Backboard

System: **Basketball**
