

COLUMN PADDING

HiTech can supply a large range of column and wall padding, varying depths, densities, fire resistance's and colours. HiTech can also provide personalised digital printing of names, logos, club names and crests to pads.

Padding is vital to ensure player safety. Indoor and outdoor padding requirements can range from posts, columns, walls and any hard or sharp surface close to the courts as these can cause potential injury to all users.

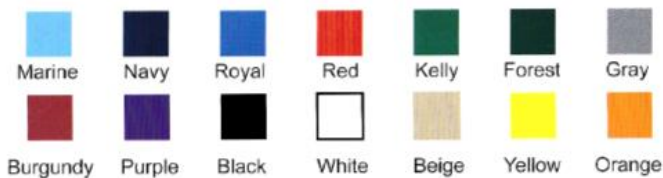

WPRSJ - Column padding is made from 50mm closed cell foam covered in a Rip, Fire and Mould Resistant vinyl attached to an OSD board for simple attachment.

Standard height is 1800mm and normally mounted 100-150mm above the floor to give an effective height of 1.95m This will clear the sports floor sweeping, cleaning and scrubbing machines. Other heights are available.

Variations can be made for corner column's and light switches.

Custom Column Pads feature a range of custom designs that can wrap around three sides of the column and attach to the wall or sides.

Heights, depths, sides, and fastening can vary to suit your columns to our design.

System: Padding
