

INTERNATIONAL HOCKEY GOAL

HiTech Sports has been Australasia's leading supplier of Hockey goals for over a half decade, with our systems used in numerous FIH events including the Commonwealth Games, Champions Trophy and World Cup over the years.

The 4th generation of our Australian designed Aluline goals continues to improve on earlier models, and incorporate new features to improve their functionality.

- 9 mm thick internally reinforced aluminium post extrusions specifically designed for Hockey
- In-profile net attachment along the uprights, crossbars, and clamped attachment on the backboards so balls cannot escape.
- Improved indentation resistance, and non-rust performance.
- Innovative free-hanging net design, introduced in our systems initially in the early 2000's to minimise support frame ball rebound.
- Powder coated backboards made from specially designed reinforced aluminium extrusions.
- Backboards finished with impact/sound absorbing rubber with keyed in application.
- Black rubber offers maximum ball contrast for visibility, and the system cannot retain water or rot.
- Goals supplied complete with wheels for mobility.
- Braided heavy duty nets.
