STADIA SPRING LOADED GOAL

MODEL
BBSG-3500i

The Stadia BBSG-3500i Spring Loaded "Posilock" goal is precisely engineered to meet FIBA international standards.

These standards require the mechanism to stay engaged until a load of 82kg to 105kg is applied vertically to the top of the ring, farthest from the backboard. When released, the ring should rotate between 10° and 30° from its original horizontal position.

Unlike many spring-loaded goals, the Posilock system ensures full compliance with these regulations.

- Meets spring release standards
- Tube tie net attachment lowers risk of hand injuries
- International hole spacing for direct mount

This goal comes standard with Stadia's FIBA-certified Indoor Basketball systems and is available as an option for Essentials models.

System: Basketball
Product Code: BBSG-3500i
